JORGE MARINEZ DIAZ

Watsonville, CA | (831) 266-0143 | jorgemarinez831@gmail.com
github.com/JorgeMarinez | linkedin.com/in/jorgemarinez | jorgemarinez.github.io

Computer Science and Biochemistry graduate with programming-instruction experience and hands-on projects in Python, Java, algorithms, and web technologies.

EDUCATION

California State University, East Bay
B.S., Computer Science | December 2024 | **B.S., Biochemistry** | December 2024
Relevant Coursework: Data Structures & Algorithms, Analysis of Algorithms, Operating Systems, Database Systems, Software Engineering, Programming Language Concepts, Computer Networks, Computer Architecture, Artificial Intelligence, Numerical Algorithms and Linear Algebra for Computer Science, Statistics and Probability for Science and Engineering

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C++
Databases: SQL, MySQL
Web: React, HTML, CSS **| Tools & Systems:** Git, GitHub, Linux/Unix
Core Concepts: Data structures, algorithms, object-oriented programming, operating systems, databases

EXPERIENCE

Coding Instructor | Code With Us | July 2019–Present
- Instructed 100+ students in programming fundamentals using Python, Scratch, C++, Java, HTML/CSS, and JavaScript.
- Guide students through debugging, algorithmic problem-solving, and software projects.
- Develop lesson plans and programming projects tailored to different skill levels.

PROJECTS

Artificial Neural Network (XOR) | Python, NumPy
github.com/JorgeMarinez/Artificial-Neural-Network
- Implemented a feedforward neural network from scratch, including forward propagation, backpropagation, and gradient-based optimization.
- Trained the XOR classifier for 10,000 epochs and confirmed correct predictions for all four binary input combinations.

Process Scheduler Simulator | Python
github.com/JorgeMarinez/processScheduler
- Implemented Round Robin, Shortest Job First (SJF), and Shortest Remaining Time First (SRTF) scheduling algorithms.
- Simulated process execution and preemption and calculated waiting-time and turnaround-time statistics.

Library Management System | Java
github.com/JorgeMarinez/LibraryManagementSystem
- Built a multi-class Java application using object-oriented design to manage books, patrons, inventory records, and lending transactions.
